

Do all your patching **directly** from the Microsoft System Center 2012 Configuration Manager console

Streamline your patch management processes!

Thanks to the full integration between Microsoft System Center 2012 and the Secunia CSI you no longer have to login to separate consoles to do your day-to-day work.

We have made the Secunia Package System available directly in System Center 2012 Configuration Manager, including all the preconfigured patches that come with the Secunia CSI.

Patching third-party programs has never been easier!

No other patch management vendor provides this level of integration with System Center 2012 Configuration Manager. Together, the System Center 2012 Configuration Manager and the Secunia CSI offers complete patch management that is second-to-none.

Benefits for IT and Security teams using Microsoft System Center 2012 Configuration Manager

It's the little things that make all the difference ...

*No noise, no clutter – just pure, relevant information that is
actionable and patches that are ready to be deployed.*

One Console approach

Control your patch management from any machine which has the Secunia plugin and Microsoft System Center 2012 Configuration Manager installed.

The integration gives increased flexibility to IT and Security teams, who are no longer tied down to one machine to do their patch management.

Dynamic Update Catalogue

The Secunia CSI provides the security patches you need – the patches that are specifically relevant for the infrastructure of your organization. The patches are based on the results of the scan performed by the Secunia CSI, which lists what particular programs and systems are relevant to patch for your organization, instead of drowning you in irrelevant information.

What is the difference between a Dynamic and Static Update Catalogue?

First, imagine going to the library and working your way through all the books on the shelves to find the ones that are new and of interest to you. Not very efficient.

Now, imagine a library that only holds the books you are interested in. That would be so much easier. And that is what Secunia CSI can offer from within System Center 2012 Configuration Manager.
